

ABSTRACT

[127] Certain embodiments of the invention may be found in a method and system for providing media in a communication network. In this regard, certain aspects of the method for providing media in a communication network may comprise receiving a media file at a first home via the communication network. The media file may be received from outside the first home and a first format for the received media file may be determined within the first home. Accordingly, the received media file may be converted from the first format to a second format that is compatible with presenting and/or playing the converted media file on a television screen within the first home.
